Share

Consider the following four alkenes.

- (A) Molecule 4 is predicted to be the most stable.
- (B) Hydrogenation of molecule 1 will release more heat than will hydrogenation of molecule 2.
- (C) Molecule 2 is a stereoisomer of molecule 3.
- (D) If you were naming molecule 3, it should be given a Z designation.
- (E) The ^1H NMR spectrum of molecule 4 would have only one peak.
