Consider the four isomeric alkenes shown below.

Which one of the following statements is *incorrect*?

- ☐ (A) Molecule ii is more stable than is molecule iii.
- ☐ (B) Molecule i would have a strong band in the IR corresponding to the double bond stretch.
- ☐ (C) Hydrogenation of molecule iv will release more heat than will hydrogenation of molecule i.
- ☐ (D) Bromine addition to molecule ii will give a meso compound.
- ☐ (E) Bromine addition to molecule iii will give a mixture of enantiomers.
