Which of the following statements is true regarding the basicity of N-methylimidazole?

- (A) It is protonated on N-1 because the resulting cation retains aromaticity.
- (B) It is protonated on N-3 because the resulting cation retains aromaticity.
- (C) Protonation on either N atom forms a cation that retains aromaticity.
- (D) N-methylimidazole is not basic because protonation on either N atom destroys aromaticity.
- (E) N-methylimidazole is most readily protonated on a carbon atom, which forms a cation that retains aromaticity.
