Which of the following statements regarding formation of a cyclic acetal from a ketone and ethylene glycol, HOCH<sub>2</sub>CH<sub>2</sub>OH, is *not* true?

- (A) The reaction can be performed using either acid or base as catalyst.
- (B) The reaction provides a useful method for protecting the ketone group from unwanted reactions.
- (C) The reaction should be carried out under anhydrous conditions.
- (D) The reaction can be reversed by treating the acetal with aqueous acid.
- (E) All of these statements are true.
