Select the correct statement regarding this reaction, and the use of dicyclohexylcarbodiimide (DCC).

- C (A) The amine first attacks the carboxylic acid, and then DCC reacts with the tetrahedral intermediate.
- ℂ (B) The amine reacts with DCC, converting the amine into a more nucleophilic derivative.
- © (C) The carboxylic acid reacts with DCC, converting the acid into a more electrophilic derivative.
- (D) Without DCC, the amine and acid would not react with each other.
- © (E) Only a catalytic amount of DCC is needed, since DCC is regenerated during the course of the reaction.
- $\circ$  (F) If the amine were secondary, then DCC would not be needed.
